PFA-Quick Couplings Series 3K

Our Answer to the Highest Chemical Requirements!

Even at first glance, the two latest additions to our product range are convincing with their **ergonomic and handy design**. The coupling and nipple can be **connected and disconnected quickly and easily** and offer a **wide range of connection options** thanks to their female G thread.

Multimedia resistance for every application!

When using alkalis, our previous quick connectors reached their limits. Our **new development in PFA** guarantees not only the **highest chemical resistance** but also **extreme durability**. Both acids and alkalis can now be transported. This makes our products even more **universally applicable** and ideally suited for **conveying highly pure & aggressive media**!

Well thought out down to the smallest detail!

The nipple and coupling in our 3K product range contain **no metal components** and are made of **USP Class VI-certified materials**. The quick connector is **drip-free thanks to valves that shut off on both ends**, can be opened **with one hand** and is characterised by a **particularly strong holding force**.

Coupling 3K700FG

Nipple 3K800FG

G 1/4"-Thread, with O-Ring
in EPDM, FFKM or FKM
